

ONE-PAGE

QUICK START

FOR FAMILIES

1 PLAN THE PRACTICE

Super charge your child's ability to learn mathematics by giving them a strong foundation. Your child will move from addition, to subtraction, then multiplication, division and beyond. Start by picking a set time each day for the ten-minute practice.

2 LOAD THE WEB-APP

Load Calabash (gotectonic.org/c) in any web browser. It will work on phones, iPads, and PCs. You don't need to pay or log in. To add it to an iPad or iPhone home screen:

In Safari,  Share Button  Add to Home Screen

3 START THE PRACTICE

Your child taps the lemon to get started. The 'Sound Check' ensures sound is working (on iPhones or iPads, make sure 'Silent Mode' is off). The timer runs for ten minutes.

4 RECORD THE RESULTS

Results show on the finished screen and in the log at the bottom of the app. If you expand the log, it will show you the most recent results. You can record the results to see progress over time. Congratulate your child for a high score!

5 LEARN MORE...

After getting started, read the full guide to learn about everything from when to use Boost Start to how a Boss Battle works. To download the guide click 'Guide' in the Calabash menu.
