

ONE-PAGE QUICK START FOR TEACHERS

1 PLAN THE PRACTICE

Fast-track student success by building a strong mathematics foundation. The secret is to practice at the same time every day. The best options are:

- 1) Whole class
- 2) Half class (independent mathematics rotation)

2 LOAD THE WEB-APP

Load Calabash (gotectonic.org/c) in any web browser. It will work on iPads, PCs, and Chromebooks. Students will need headphones. To add it to an iPad home screen:

In Safari,  Share Button  Add to Home Screen

3 START THE PRACTICE

Students tap the lemon to get started. The 'Sound Check' ensures sound is working (on iPads, make sure 'Silent Mode' is off). The timer runs for ten minutes.

4 RECORD THE RESULTS

Results show on the finished screen and in the log at the bottom of the app. Print the class tracker and use it to record student results (find the tracker under 'Guide' in the Calabash menu). Circle high scores and congratulate students. Tell students to keep their level private to prevent jealousy.

5 LEARN MORE...

After getting started, read the full guide to learn about everything from when to use Boost Start to why students start at Level 1 each time. To download it click 'Guide' in the Calabash menu.

Load Calabash
